

Your AI is **lying** to you.

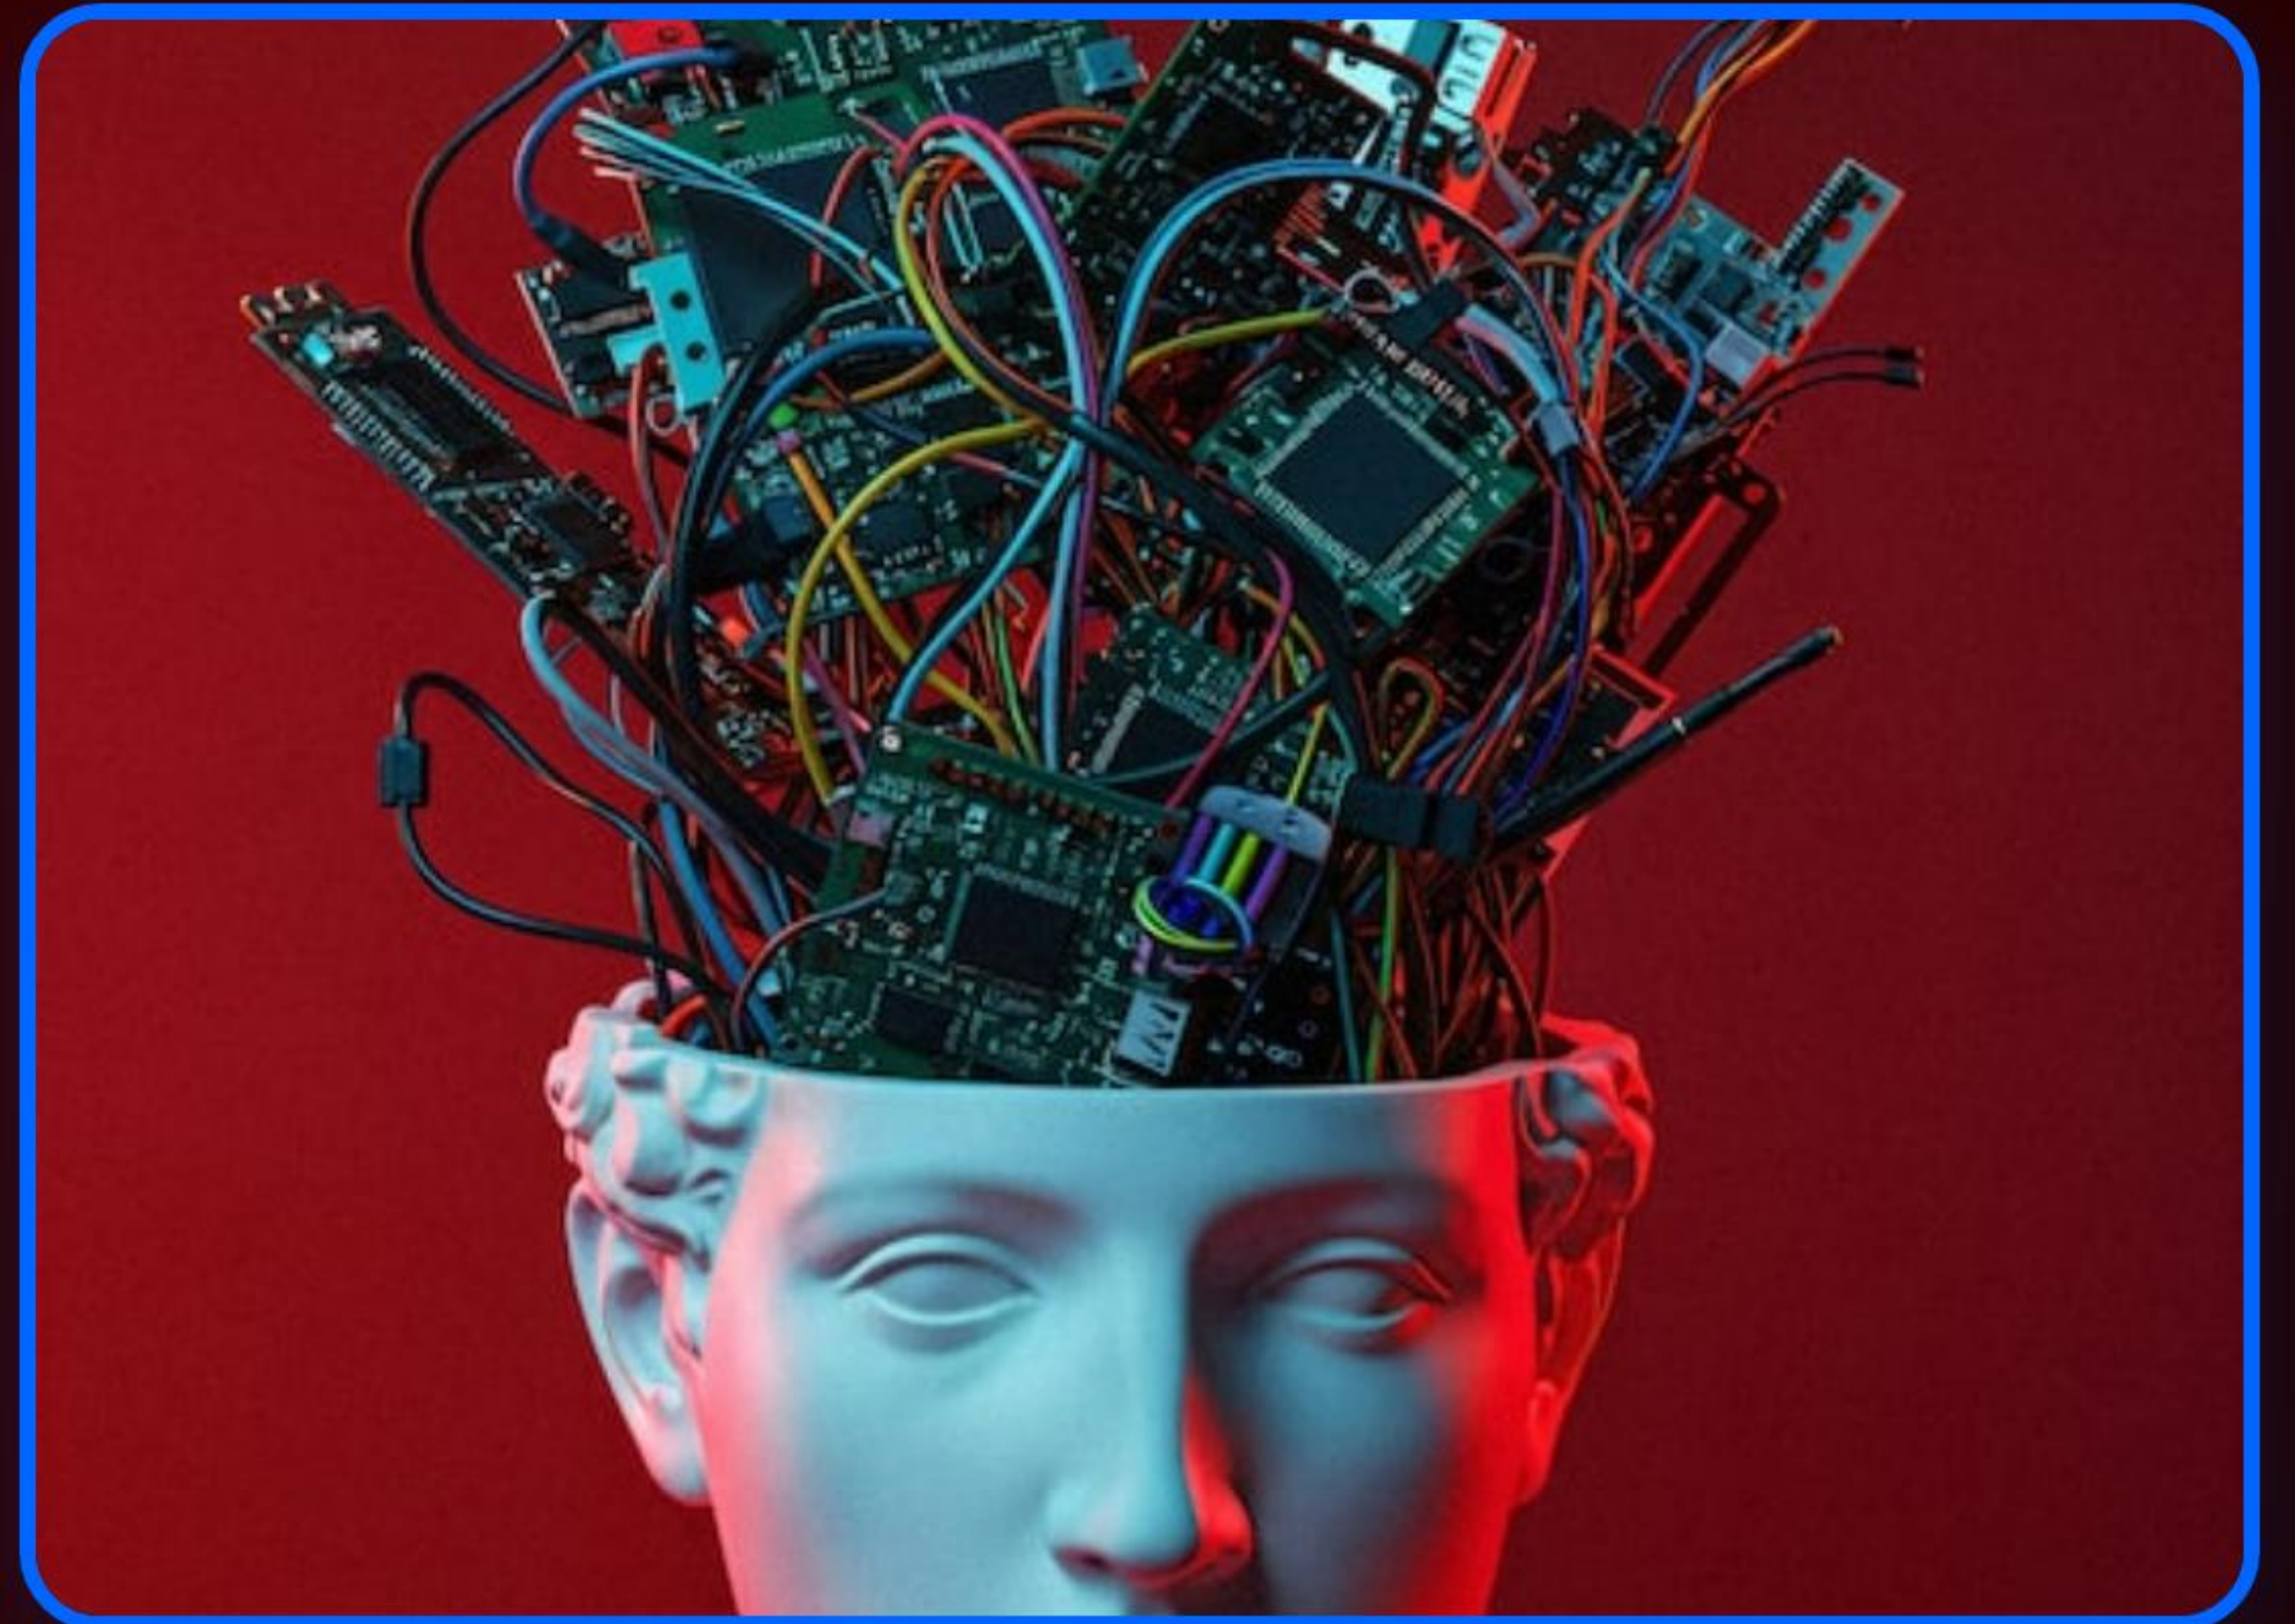

Here's the fix — RAG explained in 60 seconds

The hallucination problem 🤖

You ask your AI chatbot: "What's our leave policy?"

It has never seen your documents.
So it makes something up.
Confidently. Wrongly.

"Employees are entitled to 50 days of paid leave annually..."

RAG = Retrieval Augmented Generation

Stop asking AI to guess.

Start making it **READ** your documents first.

Store

01

Load your documents into a vector database. It doesn't just store words — it stores **meaning**.

Retrieve

02

A question comes in. The system finds the **most relevant chunks** from your documents — not from the internet.

 glowing magnifying glass searching through digital text document chunks deep blue tech background 3d

Generate

03

Those chunks go to the LLM with one instruction:
"Answer ONLY from this. Don't guess."

Hallucination eliminated.

Real project. Real numbers.

12 policy documents

111 chunks indexed

**86.7% retrieval
accuracy**

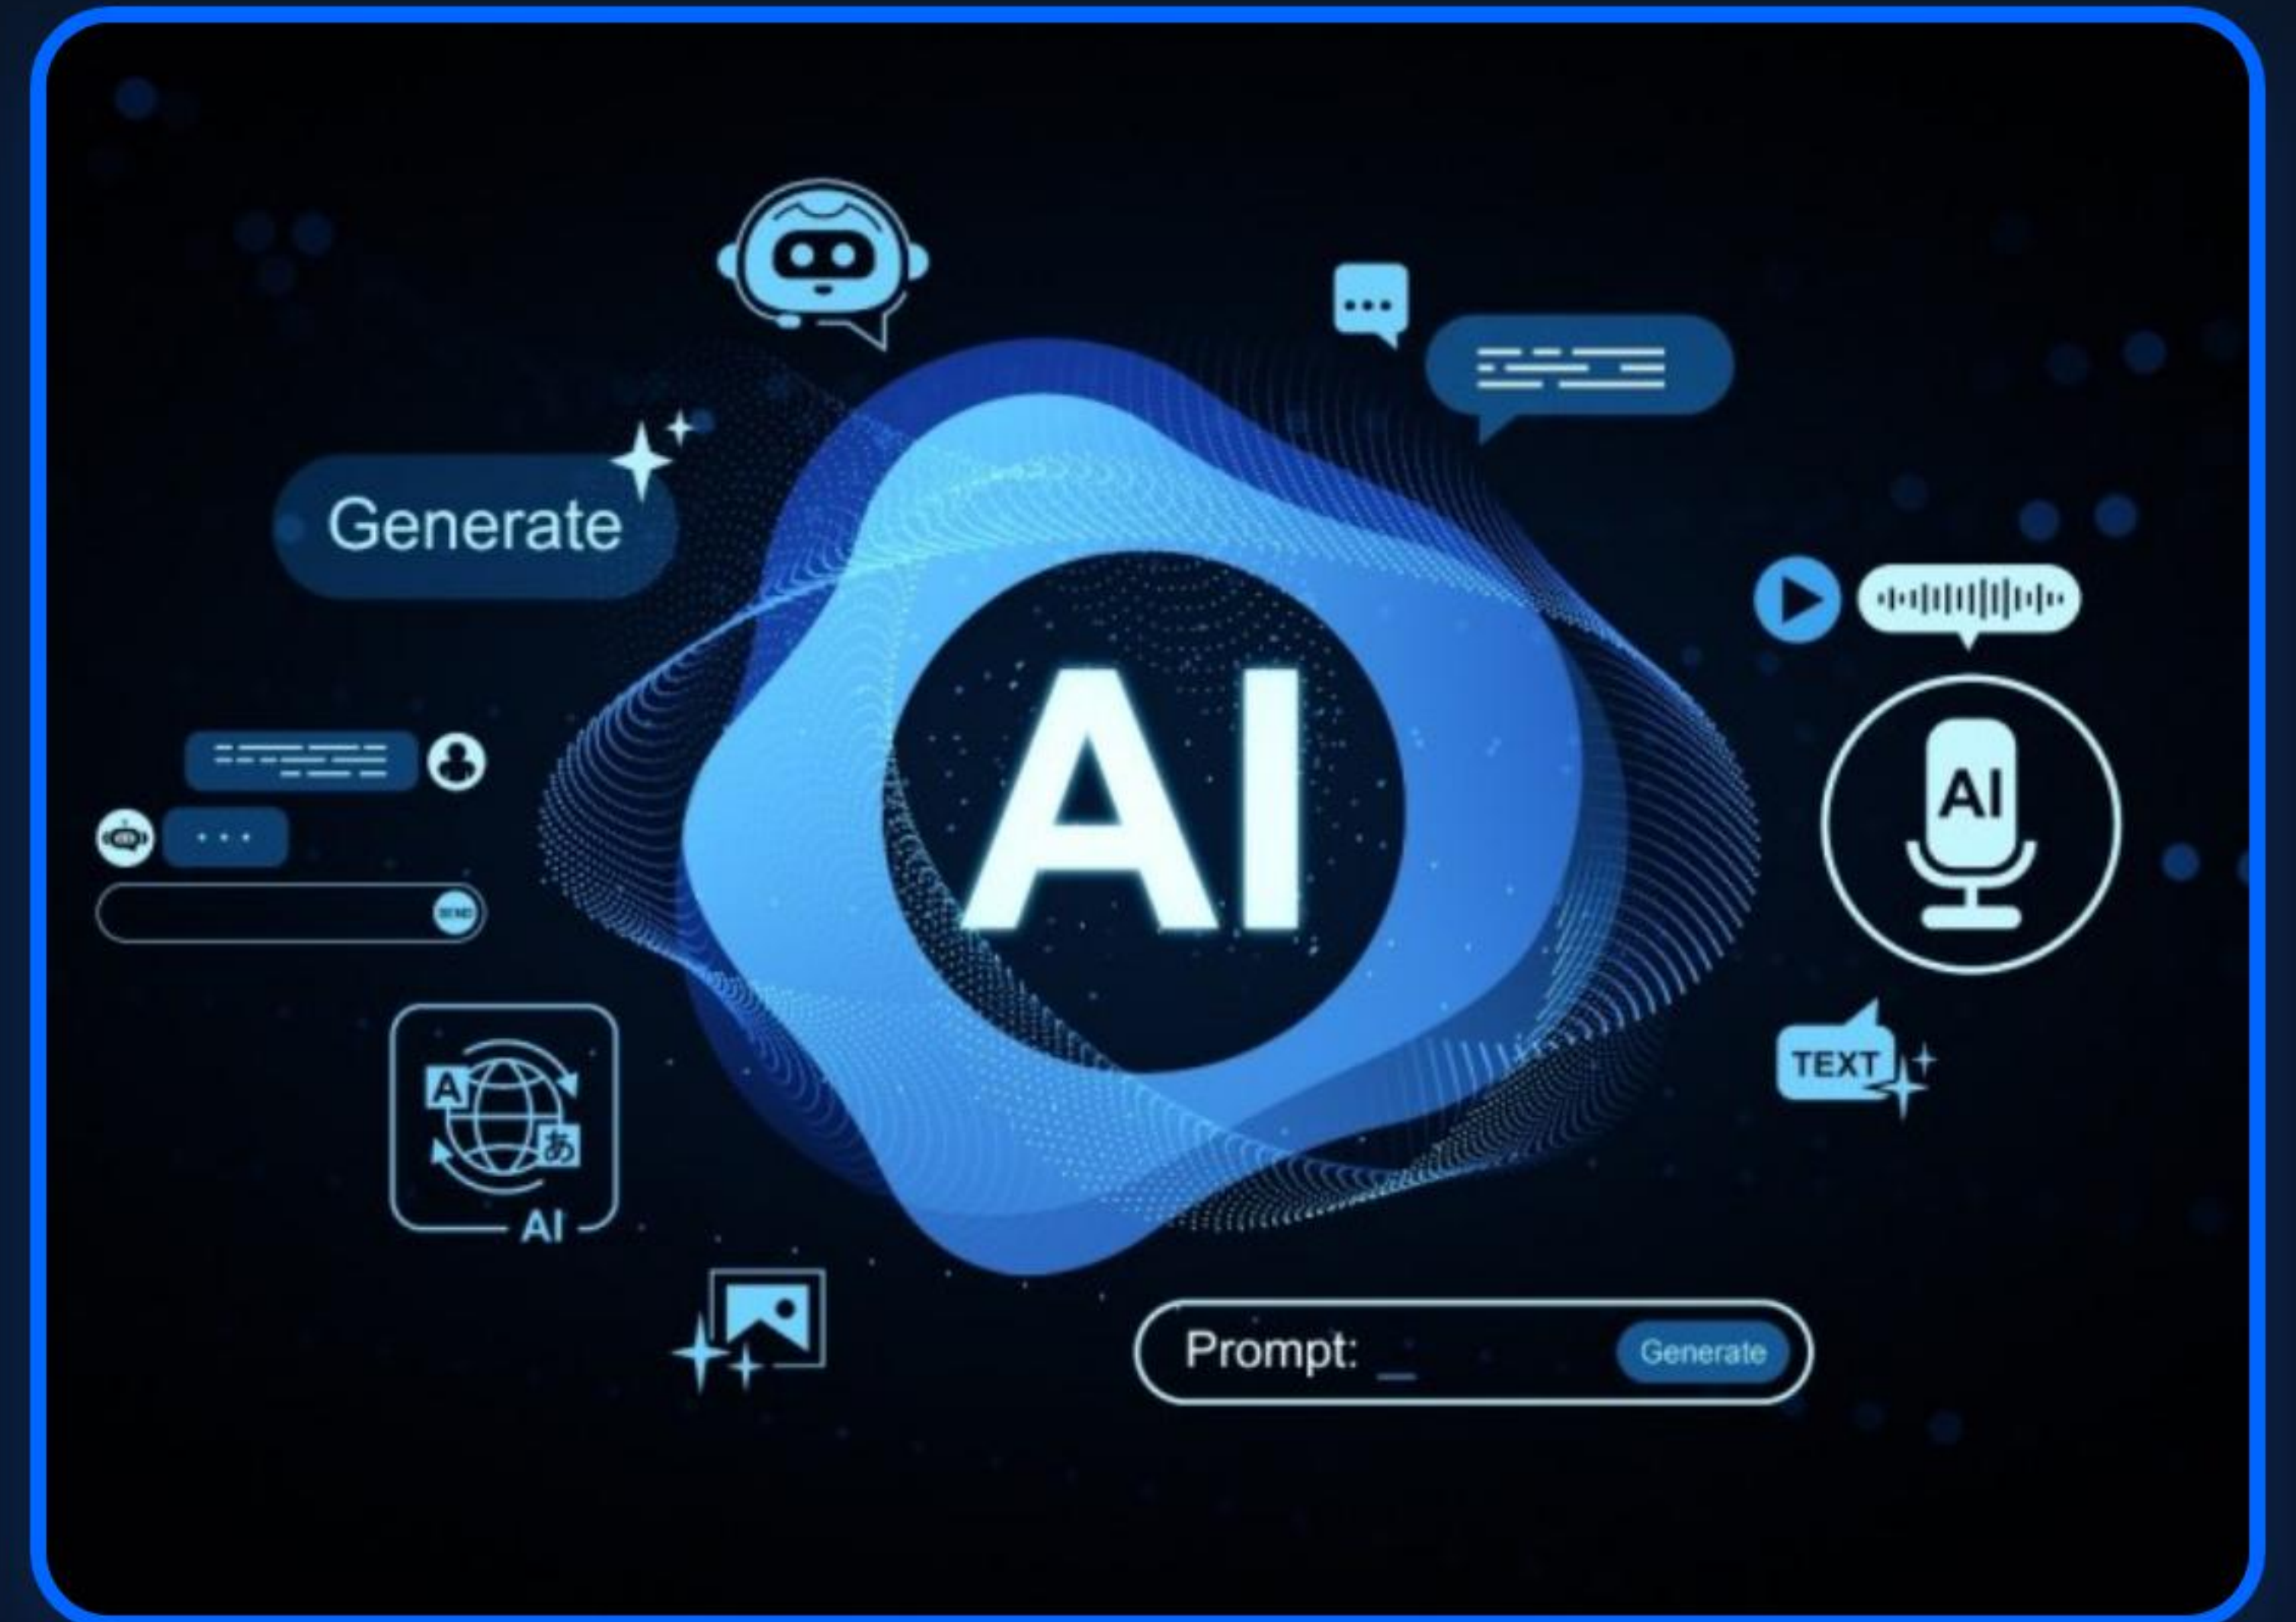

Built for banking

"Northkeep National Bank — fictional, but the architecture is real."

Why does this matter? 💡

Every answer cites its source document.

In banking, healthcare, legal — traceability isn't a nice-to-have. It's the whole point.

RAG is perfect for...

Internal policy & compliance Q&A

Healthcare knowledge bases

Legal document search

Product support & documentation

Financial research assistants

Ready to build your own?

Full project is open source.

Code, docs, evaluation suite — all free.
